

## SWC-100CS HF ANTENNA

HF BROADBAND CENTRE-FED DIPOLE  
"Digital Mode" 3.5 - 30MHz

The SWC-100CS is a *high power* commercial grade single wire broadband dipole base antenna specifically designed for the Digital Voice and Data protocols employed by modern HF Transceivers

The original SWC's that were first made over a decade ago are still going strong and have continually been improved and refined to ensure higher quality and durability than ever before.

The SWC-100CS is 34m long, however where space is limited, the SWC-100CS can be set up as an inverted "V" from either of the two sets of mounting points. At a mast height of 10m, this setup will have a footprint of only 27m.

As with the majority of Bushcomm antennas the SWC-100CS can be adapted to suit many different installation sites. It can be suspended, horizontally, as an inverted Vee, or even as a "Sloper" antenna.

Being a *true broadband* antenna, the SWC-100CS covers the frequency range of 3.5-30MHz **without the need of a tuner or coupler.**
